

Introducing Acutis Reveal™ STI sexually transmitted infection test

The CDC estimates that 1 in 5 people in the United States has a sexually transmitted infection.* Left untreated, STI's can cause bladder problems, damage to organs, reduced life expectancy, infertility in women, and other complications. As a leader in infectious disease testing, we recognize the need for accurate STI testing to get your patients the answers they need and for you to determine the best course of intervention.

Identify the presence of specific sexually transmitted infection pathogens in a measurably faster turnaround time with our newest line of PCR-based testing – Acutis Reveal™ STI.

Advantages of choosing Acutis Reveal™ STI

- Industry-leading turnaround time**
 - Regardless of the sample type or the method of collection, you will have **results within 12-16 hours from the sample receipt at our lab**, compared to most other labs providing results in an average of 72 hours or more.
 - Your patients will spend less time awaiting their results, reducing their anxiety and enabling you to provide treatment options quickly.
- Three collection**
 - We offer three methods of collection for Acutis Reveal™ STI: **a non-invasive urine sample, genital swab, or lesion swab.**
 - If you are already testing for STI at your practice, it's likely you will not need to change your current process.
- Highest quality standards**
 - Our Acutis Reveal™ STI panel currently **detects up to 9 infectious pathogens**, and our team is currently in the process of increasing the number of detectable pathogens.
 - To ensure the highest quality of STI testing in the country:
 - **Urine samples are tested with our laboratory-developed test approved by CLEP** - a third-party reviewer for the FDA and a division of the NYSDOH.
 - **Swab samples are tested with a PCR-based assay that utilizes an FDA-approved testing methodology.**

Our Acutis Reveal™ STI panel currently can detect the following pathogens:

Urine sample pathogens

Chlamydia trachomatis
Neisseria gonorrhoeae
Mycoplasma genitalium
Trichomonas vaginalis (female only)

Genital swab sample pathogens

Mycoplasma genitalium
Trichomonas vaginalis (female only)
 Bacterial vaginosis (female only)

Lesion swab sample pathogens

Herpes Simplex Virus 1
Herpes Simplex Virus 2
